Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

PTO-PAT-Email@rfem.com

Office Action Summary

Application No.

10/581,597

Applicant(s)

PARK ET AL.

Examiner

Bruce D. Hissong, Ph.D.

Art Unit

1646

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 31 October 2008.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-5 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-5 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 05 June 2006 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date 1/9/07, 6/13/08, 10/31/08
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date _____
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____

DETAILED ACTION

Formal Matters

1. The contents of the Application, including claims, specification, and drawings, were received on 6/5/06 and have been entered into the record.
2. Claims 1-5 are pending and are the subject of this office action.

Information Disclosure Statement

1. The information disclosure statement received on 1/9/07 has been fully considered.
2. The information disclosure statement received on 6/13/2008 has been considered. Citations 1-3 have been lined-through because they were cited in the IDS received on 1/9/2007. Furthermore, the citation of the Chinese First Office Action issued on 3/14/08, which was also designated as citation 1, has only been considered in regards to pages 1-3, as the rest of the document is not in English.
3. The information disclosure statement received on 10/31/2008 has been fully considered.

Claim Objections

The Examiner suggests the syntax of claim 4 can be improved by amending the claim to recite "with an ultrafiltration membrane with a molecular cut-off of 10,000". It is also suggested to amend the claim to specify the appropriate molecular weight units (e.g. kDa, daltons, etc).

Claim Rejections - 35 USC § 112, second paragraph

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 4 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The claim recites the process of claim 1, wherein the solution is subjected to diafiltration with an ultrafiltration membrane of molecular weight cut-off of 10,000. However, the claim does not recite any units, and thus it is not clear if the molecular weight cut-off is 10,000 daltons, kDa, or some other unit.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Carter *et al* ("Carter" – US 4,483,849), in view of Revel *et al* ("Revel" – US 4,808,523), and further in view of Viscomi *et al* ("Viscomi" – US 5,244,655). Carter, Revel, and Viscomi were cited in the IDS received on 1/9/2007.

The claims of the instant invention are drawn to a process for purifying human interferon beta (IFN- β) from a recombinant IFN- β -containing culture, wherein said method comprises performing affinity chromatography and cation exchange chromatography. The claims are further drawn to methods of affinity chromatography comprising washing with various buffer solutions comprising a range of propylene glycol concentrations and at cited ranges of pH, wherein said buffers further comprise sodium chloride, and wherein said buffers comprise sodium or potassium phosphate. Also claimed is said process for purifying IFN- β , wherein said process further comprises ultrafiltration of the solution obtained by affinity chromatography with an ultrafiltration membrane of molecular weight cut-off of 10,000, and subsequently loading an IFN- β -containing fraction on a cation exchange column.

Carter discloses a method of purifying IFN- β comprising affinity chromatography using propylene glycol-containing buffers (see Example 1; see also claims 1-5). Specifically, Carter teaches purification of IFN- β -containing fluid using an equilibrated Affi-Gel Blue column, which is taught by the present specification to be an affinity purification column (see paragraphs 0090-0011). Carter also discloses washing and elution with sodium phosphate buffers containing 40-50% propylene glycol (see Example 1, 2nd paragraph). Carter specifically teaches that solutions containing ethylene glycol are toxic, and

Art Unit: 1646

therefore the use of ethylene glycol is not desirable in the purification of therapeutic agents. In contrast, propylene glycol is not toxic and also yields higher concentrations of IFN- β when used in methods of purification (column 1, line 25 - column 2, line 52).

Similarly, Revel also teaches purification of recombinant human IFN- β by affinity chromatography using a Blue-Sepharose column, followed by elution with 20 mM phosphate buffer, pH 7, containing 40% propylene glycol (see column 13, line 60 - column 14, line 17; see also claims 2, 7, and 8). Revel also teaches concentration of affinity-purified IFN- β by ultrafiltration with a YM10 membrane, which is known in the art to have a molecular weight cut-off of 10,000 daltons (see Millipore catalog - <http://www.millipore.com/catalogue/itemdetail.do?id=13622> - this citation is not being used in a grounds of rejection, but to point out a physical property of YM10 ultrafiltration membranes). Although the present claims only require an ultrafiltration membrane with a molecular weight cut-off of 10,000 and does not explicitly recite any units, claim 4 has been interpreted as reading on a membrane with a cut-off of 10,000 daltons. Neither Carter nor Revel teach a process for purification of IFN- β comprising cation exchange chromatography.

However, Viscomi teaches that cation exchange chromatography can be used to purify IFN- β from cell culture supernatants containing IFN- β . Specifically, Viscomi teaches that IFN- β can be purified using a method comprising cation exchange chromatography using a phosphate buffer containing sodium chloride at pH 7 (see claim 1.b, Examples 1-2).

Therefore, one of ordinary skill in the art, at the time the instant invention was conceived, would have been motivated to practice a process of IFN- β purification that is commensurate in scope with the present claims by following the combined teachings of Carter, Revel, and Viscomi. The motivation to do so comes from the disclosures of both Carter and Revel, which teach purification of IFN- β by affinity chromatography using buffers containing propylene glycol, and the specific teaching by Carter that propylene glycol is a preferable component of such purification methods by virtue of being non-toxic because such use leads to higher yields of IFN- β . Further motivation is provided by Viscomi, which teaches that IFN- β can be effectively purified using methods comprising cation exchange chromatography. Therefore, one of ordinary skill in the art would be motivated to purify IFN- β by practicing a method comprising affinity chromatography using the propylene glycol-containing buffers of Carter or Revel because a skilled artisan would know that IFN- β can be purified by the methods of both Carter and Revel, and that the incorporation of propylene glycol, as taught by both Carter and Revel, would lead to more efficient purification and ultimately a safer therapeutic agent. Furthermore, a skilled

Art Unit: 1646

artisan would also be motivated to incorporate cation exchange chromatography into the methods of Carter and/or Revel because Viscomi teaches that this method is also effective. Further, by teaching concentration of purified IFN- β using an ultrafiltration membrane, Revel provides the motivation to further concentrate the affinity-purified IFN- β prior to cation exchange purification.

Finally, although neither Carter nor Revel disclose all of the exact claimed propylene glycol concentration ranges, it is noted that both Carter and Revel provide the motivation to use propylene glycol-containing buffers, as discussed above, and also teach buffers containing 40-50% propylene glycol, which is encompassed by some of the claimed ranges. Thus, one of ordinary skill in the art would have both the motivation and the ability to optimize the concentration of propylene glycol in the buffers of either Carter or Revel. MPEP 2144.05 states:

“[W]here the general conditions of a claim are disclosed in the prior art, it is not inventive to discover the optimum or workable ranges by routine experimentation.” *In re Aller*, 220 F.2d 454, 454, 105 USPQ 223, 235, (CCPA 1955).

In the instant case, the general conditions of the present claims, namely purification of IFN- β by affinity chromatography followed by cation exchange chromatography and the use of propylene glycol-containing buffers used with the affinity chromatography, are disclosed in the prior art, it would not be inventive to optimize the concentrations of propylene glycol.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the “right to exclude” granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Art Unit: 1646

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-5 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-5 of copending Application No. 10/581,602. Although the conflicting claims are not identical, they are not patentably distinct from each other because both applications are drawn to a process for purifying IFN- β comprising affinity purification and either RP-HPLC ('602) or cation exchange chromatography ('597). Although the '602 application is drawn to methods of affinity chromatograph and RP-HPLC, the specification of the '602 application discloses that RP-HPLC is also a method for purification of IFN- β . Similarly, although the present application is drawn to method of affinity chromatography and cation exchange chromatograph, the specification of the present application teaches that cation exchange chromatography can be used to purify IFN- β . Therefore, because both applications teach purification of IFN- β via affinity chromatograph and either RP-HPLC or cation exchange chromatography, a person of ordinary skill in the art would conclude that the subject matter of the present application overlaps with that of the '602 application..

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Conclusion

No claim is allowable.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Bruce D. Hissong, Ph.D., whose telephone number is (571)272-3324. The examiner can normally be reached M-F from 8:30 am - 5:00 pm. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gary Nickol, Ph.D., can be reached at (571) 272-0835. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
